

# Rockfon Pacific®

**Superior Acoustics. Unbeatable Price.**

Your perfect solution for any suspended ceiling needs

**Sounds Beautiful**

# How stone wool ceilings are made?

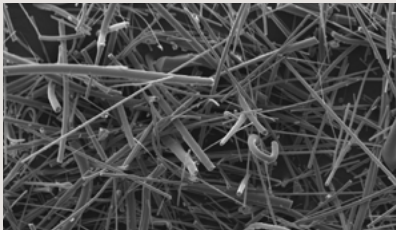

## PRODUCTION STEPS

Sourcing

Melting

Spinning into fibres

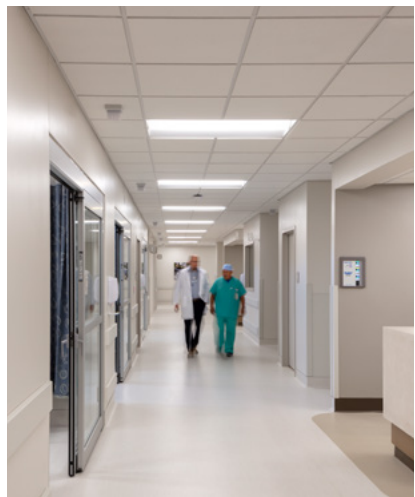

Stone wool

Our manufacturing process mimics the inside of an active volcano, using a furnace to melt volcanic rock and secondary raw materials at temperatures up to 1 500°C. The molten material flows from the furnace and is applied to spinning wheels. A powerful air stream then draws the fibres from the spinning wheels into spinning chambers.

From schools to shopping malls and hospitals, Rockfon Pacific is your go-to-choice in creating an acoustically comforting and healthy spaces.

# Why choose Pacific?

## Material

Stone wool ceiling tile with nuanced white painted fleece on the surface

### Sound absorption

$\alpha_w$ : 0.90 (Class A)

### Cleaning

Vacuum

### Reaction to fire

A1

### Recyclability

Fully recyclable stone wool

### Humidity and sag resistance

Up to 100% RH.

No visible deflection in high humidity.

### Indoor environment

Rockfon ceiling products are classified in Class E1 in accordance with EN 13964 (EN 717-1).

<p>E24</p>	600 x 600 x 12	

Know more about  
our Rockfon Pacific

## The strengths of stone

### Sound absorption

Absorbs excess noise and enhances speech

### Recyclability

Reusable and infinitely recyclable

### Surface durability

Long-lasting robustness and performance

### Humidity resistance

Does not absorb or hold water

### Fire resistance

Limits the spread of fire and improves safety

### Hygiene

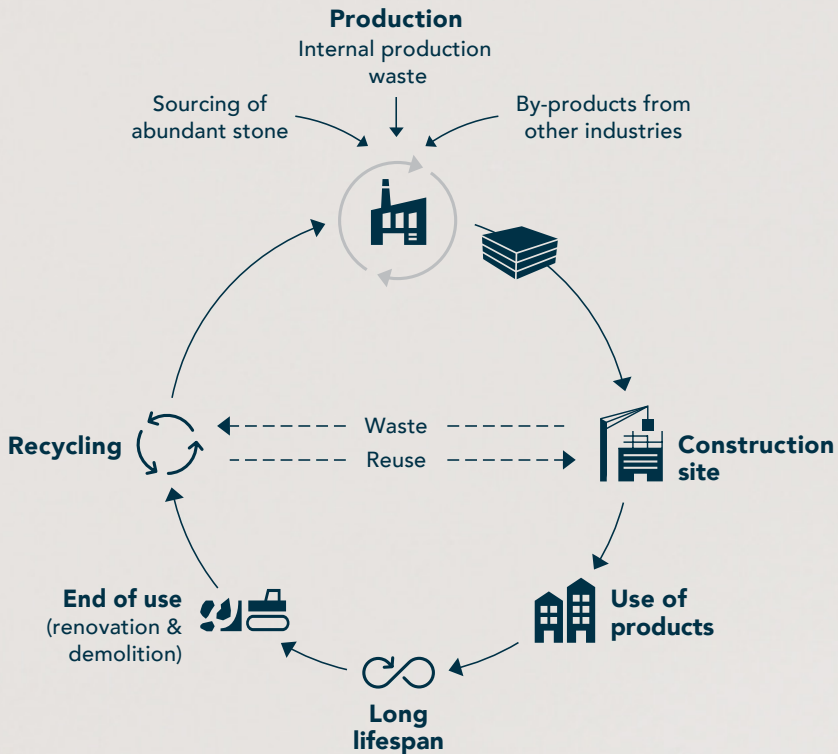

No sustenance to microorganisms and mould

### Aesthetics

Matches performance with visual appeal

# We're circular and are closing the loop
